Teacher References:

971.23 ALBERTA STORY: Grade 5, Section A and Grade 4, Section B. (Alberta Dept. of Education)

This is a teacher's resource unit especially designed for Grade V Section A and Grade IV Section B.

Because of the difficulty normally experienced in obtaining authentic material on some phases of Alberta's history, Government Archives have been consulted for such sections as: The History of Alberta's Ranchlands, Paul Kane's Journey Through Western Canada, History of Early Days in Calgary, Life in Fort Edmonton, etc. On topics which are well covered in the available references, only sufficient material has been included to give continuity to the story and, in the case of industries, a broad general outline gives us a well-rounded economic picture.

Statistics covering weather, production, personal income, growth of population, oil production and reserves are the latest available, and a set of Alberta maps showing weather, population, products, soil vegetation, etc., will prove very useful for purposes of comparison and for studies of cause and effect.

This resource unit is the largest so far prepared here for the use of teachers and it is felt that with its extensive notes on the history and present economy of the province, together with its wealth of illustrative material, the booklet will provide teachers with a sufficiently good background to begin any enterprise on Alberta.

- 971.23 ALBERTA STORY: Grade 5, Section A and Grade 4, Section B. (Alberta Dept. of Education)**

This is a teacher's resource unit especially designed for Grade V Section A and Grade IV Section B.

Because of the difficulty normally experienced in obtaining authentic material on some phases of Alberta's history, Government Archives have been consulted for such sections as: The History of Alberta's Ranchlands, Paul Kane's Journey Through Western Canada, History of Early Days in Calgary, Life in Fort Edmonton, etc. On topics which are well covered in the available references, only sufficient material has been included to give continuity to the story, and in the case of industries a broad general outline gives us a well-rounded economic picture.

Statistics covering weather, production, personal income, growth of population, oil production and reserves are the latest available, and a set of Alberta maps showing weather, population, products, soil vegetation, etc., will prove very useful for purposes of comparison and for studies of cause and effect.

This resource unit is the largest so far prepared here for the use of teachers and it is felt that with its extensive notes on the history and present economy of the province, together with its wealth of illustrative material, the booklet will provide teachers with a sufficiently good background to begin any enterprise on Alberta.
